

LYCLEAR

KILLS HEAD LICE & EGGS FAST
TREATMENT SHAMPOO **+ COMB**

Read the instruction leaflet carefully before treatment.

About head lice

The head louse is a tiny wingless insect that lives exclusively in hair and feeds on blood. It moves around using its 3 pairs of feet that allow it to attach itself to hair. An adult louse is 3-4 mm long and lives about 30 days.

A female louse can lay 200 to 300 eggs during that life span. They hatch after 7 days and become adults in 10 days. When feeding, lice inject saliva into the scalp, which can cause a hypersensitive reaction resulting in severe itching and irritation. Diagnosis is confirmed by thorough examination of the hair, looking for lice or eggs that are more easily visible.

About Lyclear Treatment Shampoo

Lyclear Treatment Shampoo is clinically tested and proven to be an effective head lice treatment: its double action formula not only eliminates head lice and eggs, it also washes the hair at the same time and eases lice combing thanks to its conditioning agents.

Clinical studies have demonstrated up to 100% efficacy of Lyclear Treatment Shampoo against lice and nits on an average European infestation level.

Because Lyclear Treatment Shampoo works by a physical mode of action, head lice are unlikely to develop resistance to its ingredients.

Lyclear Treatment Shampoo has been tested under dermatological control.

How to use Lyclear Treatment Shampoo?

All you need to do is follow the step-by-step instructions below.

Check for the presence of head lice

Use the enclosed fine toothed Lyclear anti-lice comb to thoroughly check the hair of each family member, preferably in daylight.

Treat all those who have got head lice, the same day, in order to avoid re-infestation.

- It is easier to check dry hair.
- First of all, brush to remove tangles, and then check the hair lock by lock.
- Check the hair roots, behind the ears and on the nape of the neck, it is often in these areas that lice and eggs are found.
- After each use, carefully clean the comb in lukewarm, soapy water, so as to avoid any further infestation.

Step n°1: apply Lyclear Treatment Shampoo

Shake the bottle before use. Apply a sufficient quantity of Lyclear Treatment Shampoo evenly onto dry hair, avoiding the area around the eyes. Be sure to cover all the hair and scalp with a thick layer of the product. Massage well from the roots to tips paying particular attention to the neck and the area behind the ears.

Step n°2: leave on for 15 minutes

Leave it on for 15 minutes. This is vital for a successful treatment.

Step n°3: remove the lice & eggs

Before washing the hair, use the fine toothed Lyclear anti-lice comb to remove lice and eggs.

Step n°4: add water and wash the hair

1. Comb wet hair with the fine toothed anti-lice comb.
2. Divide the hair into 4 sections: from the forehead to the nape of the neck then from one ear to the other. For long hair, you can braid each section.
3. Treat each section by isolating small locks of hair so that the head is visible.
4. Comb each lock of hair starting as close as possible to the head.
5. Using the comb, remove each louse and/or egg that is found.
6. Each lock of hair that is egg free can be put to one side.
7. In order to avoid any re-infestation, clean the comb after each lock with a cotton wool pad or ball and always comb from the top of the head to the bottom.

Don't forget to decontaminate the environment.

Decontaminate clothes, bed linen, towels and other items (brushes, combs etc.) that were in direct contact with the head by washing them at 60°C. Carefully vacuum clean the house and car, then throw away the vacuum bag.

You can also leave all items in a closed bag for 2 to 3 days as head lice cannot survive without feeding.

Important note

Head lice are unlikely to develop resistance to Lyclear Treatment Shampoo, as it has a non-chemical mode of action. However, it is possible that people who have been treated can get lice again from other untreated individuals (for example at school). Check dry hair for head lice again after 7 days. Repeat the treatment if necessary. In this event, you can use Lyclear again as it will still be effective.

Precautions before use: Do not use this product on:

- people allergic to any of the listed ingredients
- children under 2 years old.

Pregnancy and breastfeeding

There is no contraindication for pregnant and breastfeeding women to use Lyclear Treatment Shampoo. However, it is recommended to always seek the advice of your doctor or pharmacist before using a product when pregnant or breastfeeding.

Caution

Do not swallow. Do not use on irritated skin. For external use only. Consult a doctor or the anti-poison centre in case of accidental ingestion. Avoid all contact with the eyes and mucous membranes (mouth, nose). In case of contact with the eyes, rinse thoroughly with clean water. If eye irritation persists, seek medical advice. Do not use if allergic to perfume or any of the listed ingredients. In the event of a rash breaking out, an irritation, or hyper-sensitivity stop the treatment immediately, and wash your hair with your regular shampoo.

Possible side effects

Itching and irritation around the eyes. Flaking of the scalp. Contact irritation and redness of the scalp, ears or neck.

Storage

- Store in a dry place at room temperature (15°C - 25°C).
- Do not use after expiry date displayed on bottle.
- Keep out of the reach of children.

Disposal

When disposing of the bottle, rinse and recycle according to local waste management guidelines.

Composition

Osmolone®, foaming agents, conditioning agents, excipients, perfume, farnesol, geraniol, lemonene, linalool.

Manufacturer

Medgenix Benelux nv, Vliegvelde 21, B-8560 Wevelgem.
